Campus CMS Users Meeting
May 20, 2014

- Monthly Users’ Meeting was hosted on-line via ReadyTalk. The initial meeting was a test to see if we could increase attendance and participation. Attendance increased by a factor of four and we’ll be continuing to host the meetings on-line unless an in-person get-together is warranted.

Cascade Server 7.10 Update:

- Provided a demo of the new features available since our upgrade to Cascade Server 7.10. The list of changes are detailed in our article: Upgrade to Cascade Server 7.10.

Responsive Web Design:

- Responsive Web Design (RWD) is now live and available in the service.
- Site managers can activate the feature via the _Site configuration file.
- Walk-through documentation on how to use RWD is in the training section of the Web CMS Service site.
- Finer grain detail in each page gives users a way to decide how content will flow, changing from multi-column to single column on a tablet or smart phone. Content Flow guidance is documentated.
- Additional documentation for how to optimize, test and apply custom code to RWD is also available.

State of the Service:

- Rick Hill, the CMS Administrator, is presently on vacation until the end of June, after which he will be transitioning immediately to his retirement.
- Upper management has no plans at this time to replace him.
- Jessica and Christian will be continuing to provide administrative, technical and service support, though it is hoped that users will not experience a slow down in customer service.
- The Web CMS Service is going to be undergoing a transition in the next year as Upper Management creates a consortium of like-services and requests appropriate funding and support for it. During this time, no changes are anticipated in the type of software used by Web CMS going forward.

Upcoming projects:

- Smart navigation
- Blog project
- Services block
- Location map
- Form block version 2
- WYSIWY style update
- For details see our Development Roadmap
